AMERICAN MOTORS PARTS CATALOG

SOFT TRIM ESTIMATE CHART

This chart has been designed to aid you in preparing estimates involving soft trim parts. Prices listed for each description are average list prices and therefore are subject to change without notice. However, by their usage, reasonable accurate estimates can be compiled.

Individual component panels of any complete upholstery assemblies such as Seat Cushions and Seat Backs can be supplied cut to pattern if so desired. When ordering, first obtain the correct nomenclature of the complete assembly from the Soft Trim Chart and then specify the individual panel or component part required.

Bulk upholstery materials used in fabricating trim assemblies are also available. The width of the cloth and imitation leather varies from 54" to about 64". Cloth and imitation leather are sold by the running yard. Genuine leather is priced and sold by the square foot. The average hide has 50 square ft. of leather in it.

To use this chart we suggest you refer to the illustrations which immediately follow this trim chart. They will show the part most closely related to the item you wish. Find the illustration reference number and then locate that number in the first column of the chart. The description of the item you seek should be in the second column following the illustration reference number.

Determine the vehicle model number from the model number plate. Select the proper column pertaining to that model from information provided below and locate the average list price of the item desired.

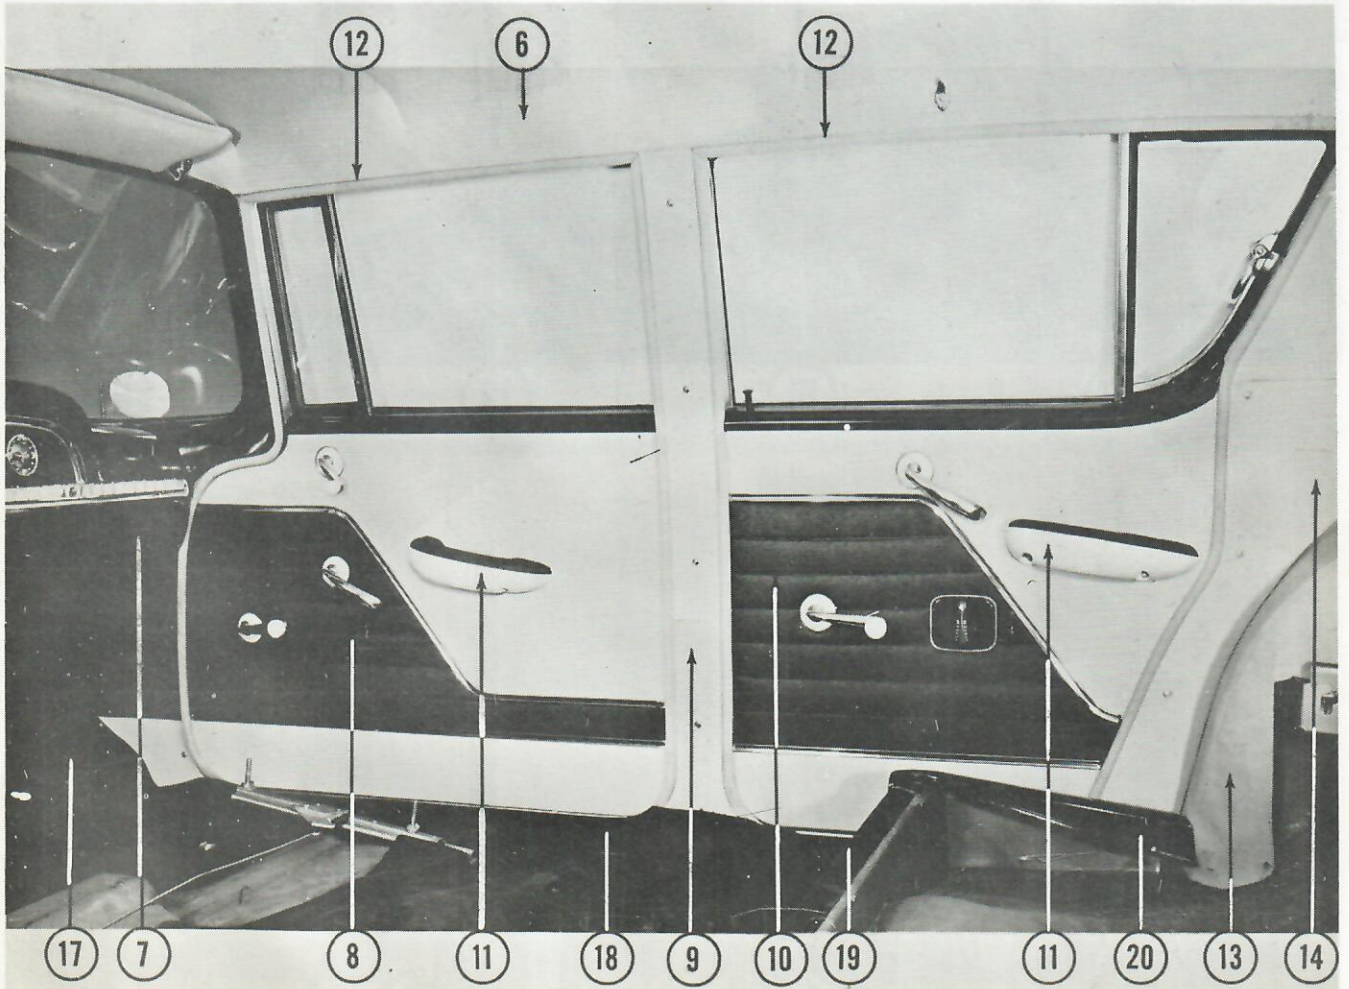

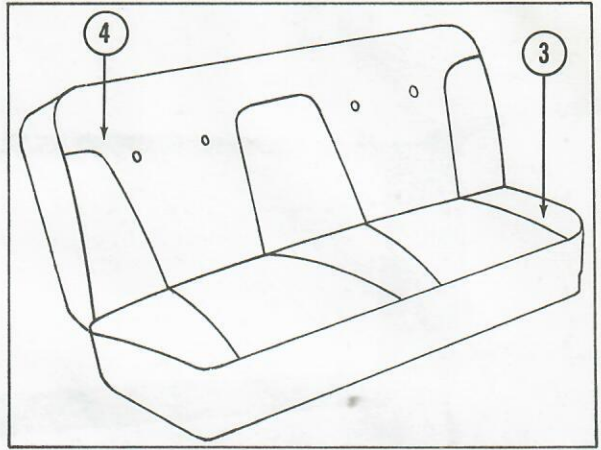

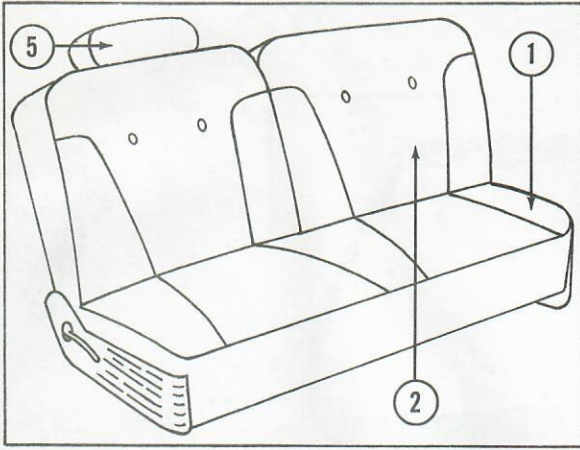

Deluxe Models.....No suffix after model number
 Super Models.....Suffix (- 1) after model number
 Custom Models.....Suffix (- 2) after model number
